Application Management System JC-Electronics**Purpose of the Management System**

JC-Electronics is utilising an integral quality management system within Microsoft Sharepoint which is readily available for every employee. The purpose of this management system is:

- To support, manage and steer the company operations;
- To improve the organization, processes and products to remain compliant to changing demands from the market and legal entities;
- To act as an aid to gather insight into activities, tasks, responsibilities, information structure, results, and the relevant execution of analysis.
- To supply insight into company processes for (new) employees;
- To continuously improve and build on the level of customer satisfaction.

Build-up of the Management System

The Management System is primarily built within the concept of end-to-end chains. These process chains are sorted into main subjects and together they form the company model. They consist of:

- Policy and Strategy
- Primary process chains
- Supporting processes
- Evaluation

Applied regulations

The Quality Management System of JC-Electronics is built and implemented according to the norm ISO 9001:2015. The following articles do not apply to JC-Electronics:

- 8.3: The organization needs to determine, implement and maintain a design- and development process which is suitable for delivering the right products and services.

JC-Electronics doesn't execute design- and development activities.
